

AI gig work orchestration.

No downloads. No dashboards. Just text, call, or email
Gigler, and real work gets done.

AI can act now. But people still have to choose the right tool, manage each step, and keep the work on track.

Codex, Claude Code, Cursor, Gemini, ChatGPT, browser agents, and cloud tools are getting more capable every week. But each one lives in its own interface, context, memory, and workflow.

Even as AI gets more capable, users are overwhelmed by which tool, model, or agent fits each task and their unique workflow. Gigler removes that burden: ask for the outcome, and Orca, our model designed and trained specifically to orchestrate AI agents and tools, breaks the gig into steps, chooses the right mix, and coordinates frontier agents across platforms. One step might go to a frontier coding agent, another to a cloud or browser tool, and another to an AI agent with specialized capabilities, all coordinated toward the completed gig.

As gigs are completed, Orca keeps getting smarter at routing work across models, agents, and platforms.

A completed AI Gig is not a chat transcript. It is the work delivered: photos organized, trips planned, APIs built, spreadsheets updated, forms submitted, websites deployed. No new dashboard. No workflow to learn. Just text, email, or call Gigler. Zero friction.

**Send a request.
Or add Gigler to the
thread.
It plans, tracks, and
delivers.**

An AI gig worker, always on. Gigler reaches you by phone, text, or email with updates and questions.

Every request becomes a Gig.

A user sends a request by text, email, or voice. Gigler turns it into a dedicated Gig with its own memory, schedule, progress updates, and deliverables.

Gigler brings together best-in-class agents, AI tools, and frontier models without locking users into any single system. It orchestrates the right tool for the gig, and the right tool for each task inside that gig.

When a decision matters, Gigler reaches the user by phone, text, or email, then keeps the gig moving.

Agent toolkit

- Reply via SMS / MMS / email / voice
- Browse and fill out web forms
- Generate PDFs, sites, reports, deliverables
- Run real code in a sandbox
- Read images, video, documents
- Schedule reminders & follow-ups
- Live View hand-off to a human

The team-parents group chat.

Saturday, 9am. A parent adds +1-555-GIGLER to the group thread:

- 9:02 AM** Mom: *"Hey Gigler, can you organize photos during the tournament and recap each game?"*
- 9:03 AM** **Gigler:** "On it. Drop photos and game clips here. I'll sort by player and recap when each game ends."
- 10-11 AM** Parents share photos and a livestream link. Gigler watches the video, identifies players via jersey numbers, tags photos automatically.
- 11:15 AM** **Gigler:** "Game 1 recap: 3-1 win. Top moments: Avery's assist (4:12), Maya's save (8:30). Photo album: gigler.ai/d/k7m2"
- 5:00 PM** **Gigler:** "Tournament wrap: 4 games, 32 photos sorted by 12 players, 4 recap videos, parent email sent. PDF album attached."

AI gig worker. Always on.

Beach, office, or on the go — text it and it's done.

FLAGSHIP CAPABILITY

Gig Programmer

Code, debug, and ship features. Anytime, anywhere. From a hammock if you want.

```
const app = express()
app.get('/api', handler)
app.listen(3000)
```

✓ Deployed successfully · preview at gigler.ai/d/k7m2

Gig Orchestration

Plan, track, coordinate, deliver.

Landing Pages

Full websites from a text description.

Event Planning

Book venues, send invites, coordinate.

Photo Collages

Organize and share event photos.

PDFs & Reports

Polished documents and summaries.

Restaurant Menus

Print-ready or shareable online.

Excel Sheets

Organize, analyze, share data.

Bills Dashboard

Auto-extracted utilities, due dates.

We sell completed work, not another AI seat.

CUSTOMERS

Consumers & prosumers

People who need useful digital work done without managing apps, vendors, or dashboards.

EXPANSION

Teams & groups

Group chats, family logistics, creators, operators, and small businesses coordinating repeatable work.

REVENUE

Per-gig + subscription

Start with paid gig requests, then expand into recurring plans for frequent users and teams.

Gigler's wedge is simple: users pay for outcomes, not tokens, seats, or tool selection. They ask in the channels they already use, then Gigler orchestrates the tools and agents behind the scenes.

Five things just clicked into place.

- LLMs are finally good enough for autonomous, multi-step execution. Not just chat.
- Vision + multimodal models can watch video, read receipts, classify uploads in real time.
- Headless browsers are programmable, observable, and human-in-the-loop ready.
- Sandboxes for code execution are cheap, safe, and per-session billable.
- Voice, SMS/MMS, and email infrastructure is commodity. Reach is universal.

The first generation of consumer AI agents that actually do work, not just answer questions, is here.

Agent orchestration for real-world work.

Current platform

- AI agents for planning, execution, progress tracking, and delivery
- Text, email, voice, and shared workspace interfaces
- Tool orchestration across code, browser, documents, images, and workflow systems
- Per-gig memory, status, deliverables, and human checkpoints
- Cloud-native execution designed for repeatable agent workflows

NVIDIA fit

- **NVIDIA Inception member** with access to startup ecosystem benefits
- **NVIDIA NIM** for scalable inference across agent workloads
- **NVIDIA NeMo / Guardrails** for safer autonomous and human-in-the-loop workflows
- **NVIDIA Riva** for future voice briefings, voice input, and decision calls
- **GPU cloud partners** for lower-latency, higher-throughput agent execution

Live product. Active users. Aggressive roadmap.

407

ACTIVE TESTERS (ALPHA)

~\$1M

FUNDING RAISED

Q2-Q4

NEAR-TERM AGENT ROADMAP

- Live SMS & email gig completion at gigler.ai today.
- 407 active alpha testers validate demand for screen-free AI work execution.
- Roadmap: deeper per-gig orchestration, code sandboxes, browser agents, and voice agents.

THE ASK

Help us fund. The AI gig worker for real work.

Gigler is building the future of productive work: quality outcomes over process, powered by AI gig orchestration across voice, text, email, and shared workspaces.
