

1 · CHANNELS — IDENTITY IS THE SENDER, NOT THE DESTINATION

 **SMS / MMS**
Twilio · shared number · sender = identity

 **Email — unique address per gig**
gig+{shortCode}@gigler.ai · onEmail agent hook

 **Voice**
realtime speech-to-speech · Pipecat

 **Web dashboard**
live gig state · review & approve

2 · ORCA ORCHESTRATION LAYER — ONE STATEFUL AGENT PER GIG

ORCA · plan → route → execute → verify
intent & gig-type classification · step planning · tool/model routing (easiest path first) · progress & memory in per-gig state · human-checkpoint policy · durable execution & resume

Frontier LLM
model-agnostic · reasoning · vision · generation · function-calling · MCP

Human checkpoint
approve · log in · confirm

3 · EXECUTION SURFACES — ROUTED PER STEP

Document / media
HTML → Chrome → PDF & PNG

Browser tasks
real Chrome · forms · bookings · bill pay

Code & deploy
sandbox · scaffold · live preview

Vision
read PDFs · receipts · photos

3rd-party APIs
OpenTable · Resy · Evite · Stripe

4 · STATE & DELIVERY

Per-gig state
messages · participants · reminders · media · checkpoints

Cross-tenant index
users · gigs · deliverables · billing

Object storage
media + deliverables (S3 → R2)

Scheduling
durable reminders · check-ins · follow-ups

Deliverable link
gigler.ai/{shortCode} · OTP-gated · proof captured

Orchestration / delivery AI model (provider-agnostic) Execution tool / platform Human-in-the-loop

Existing system runs on AWS (Amplify Gen 2, Next.js, DynamoDB, Lambda); the hardened evolution moves the email channel, per-gig isolation, and durable execution onto Cloudflare Workers + Agents SDK + Durable Objects + R2. Orca is model-agnostic and routes each step to the best-fit frontier model.
