

Gigler Orca — System Architecture

AI gig orchestration: text · email · voice in → orchestrated execution → a delivered outcome out

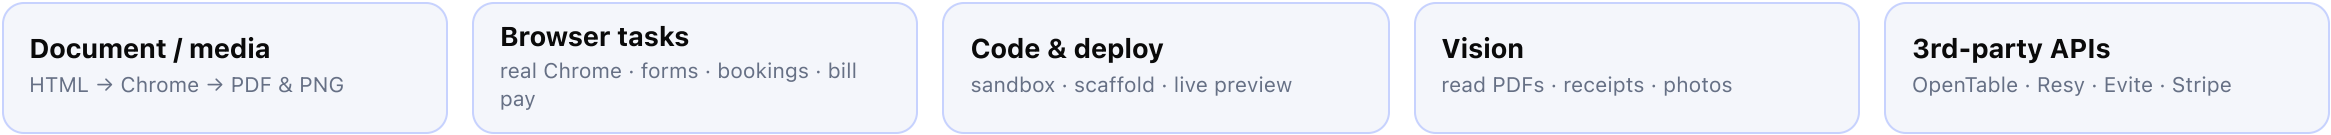

1 · CHANNELS — IDENTITY IS THE SENDER, NOT THE DESTINATION

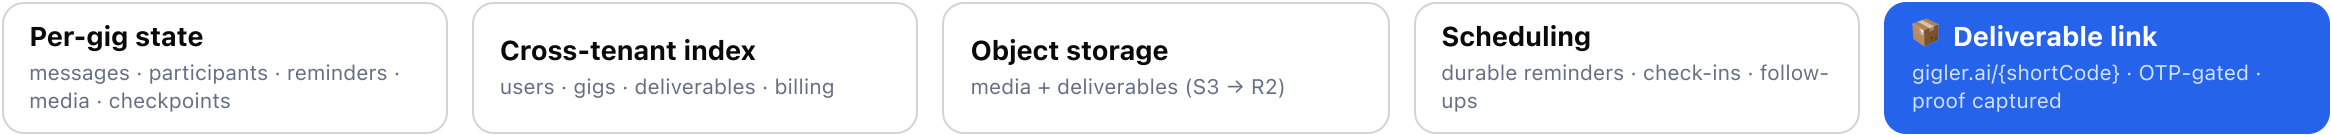

2 · ORCA ORCHESTRATION LAYER — ONE STATEFUL AGENT PER GIG

3 · EXECUTION SURFACES — ROUTED PER STEP

4 · STATE & DELIVERY

■ Orchestration / delivery ■ AI model (provider-agnostic) ■ Execution tool / platform ■ Human-in-the-loop

Existing system runs on AWS (Amplify Gen 2, Next.js, DynamoDB, Lambda); Track 2 hardening evolves the email channel, per-gig isolation, and durable execution onto Cloudflare Workers + Agents SDK + Durable Objects + R2. Orca is model-agnostic and routes each step to the best-fit frontier model.
